

TECHNICAL PROFESSIONAL

ICT - ANIMATION

Grade 12

Three-Term Budget Of Work (BOW)
for Learning Competencies

TECHNICAL PROFESSIONAL ICT - CREATIVE ARTS AND DESIGN TECHNOLOGY Grade 12

Three-Term Budget Of Work For Learning Competencies

Please note that each TechPro elective is completed within one term if delivered at Grade 12.

Term Plan	
Elective	Animation
Performance Standard	The learners create character designs using hand drawing techniques. The learners create cleaned-up drawings for traditional animation and storyboard. The learners create clean up and in-between drawings/key extremes and breakdown using digital drawing techniques. Learners create digital animation output and calculate animation cost based on industry standards.
Content Standard	• The learners demonstrate understanding of the concepts and principles of creating character design using traditional hand drawing techniques. • The learners demonstrate understanding of the concepts and principles of creating cleaned-up drawings in traditional animation and storyboard. • The learners demonstrate an understanding of the concepts of creating in-between drawings/key extremes and breakdown using digital drawing techniques. • The learners demonstrate understanding of the principles in creating digital animation and calculate animation cost based on industry standards.

Week	Learning Competency	Suggested Activities
1	- Discuss animation fundamentals. - Use tools, equipment, and materials in traditional animation. - Apply traditional hand drawing techniques in animation.	Animation Through the Ages - Students will examine the history, trends, and industry impact of animation across different periods. Create and present a creative timeline showcasing key developments, trends, career opportunities, and relevant laws in your assigned animation era. Launch Your Dream Animation Studio - Students will apply knowledge of animation types, principles, workflow, and industry regulations by designing a mock studio. Design and pitch your own animation studio concept, including its type, workflow process, roles, target market, and applicable laws. Studio Simulation: The Traditional Animation Desk - Students will demonstrate proper use, labeling conventions, and record-keeping procedures for traditional animation materials, tools, and equipment. Set up a mock animation workstation and correctly organize, label, and document storyboard

Week	Learning Competency	Suggested Activities
		sheets, model sheets, exposure sheets, and clean-up tools following standard studio procedures. • Animation Production Paper Trail ○ Students will apply correct labeling symbols and record-keeping policies in managing traditional animation drawings and documents. ○ Prepare a complete set of properly labeled animation drawings with corresponding timing/exposure sheets and a simple production record log. • Lines That Speak ○ Students will apply proper line techniques and construction drawing to create structured and expressive character sketches. Draw a character using construction lines and varied line weights to show form, depth, and emotion. • Perspective in Action ○ Students will demonstrate understanding of basic perspective and construction drawing in creating spatial scenes. Create a simple one-point or two-point

Week	Learning Competency	Suggested Activities
		perspective background scene using proper guidelines and construction techniques.
2	Create character designs for traditional animation.	Design a Star! - Students will apply proper proportion and basic anatomy principles in creating an original character design. Create a full-body original character showing correct proportions and basic anatomical structure. Character Turnaround Challenge - Students will demonstrate understanding of character profile and consistency in design. Draw a character turnaround sheet (front, side, and back view) maintaining consistent proportions and anatomical accuracy.
3	Create traditional cleaned-up drawings.	Clean-Up Master Challenge - Students will apply proper clean-up techniques to produce polished and model-consistent key animation drawings. Create cleaned-up key drawings of a selected action (head turn, walk/run cycle, or expression change) ensuring accurate

Week	Learning Competency	Suggested Activities
		modeling, smooth lines, and consistency. • Bring It to Life: Keyframe Performance ○ Students will demonstrate mastery of modeling and clean-up techniques in expressive character animation. How : Produce finalized cleaned-up key drawings of a short animated sequence (e.g., lip-sync dialogue, wave action, or character turn) following animation standards.
4 to 6	• Discuss in-between drawing concepts. • Create in-between drawings.	• Fill the Motion Gap! ○ Students will apply the concept of in-betweening using correct timing and breakdown techniques to create smooth motion. Complete the missing in-between drawings between two keyframes using proper breakdown, timing, and pegging techniques, then perform a simple line test. • Timing Makes the Magic ○ Students will demonstrate understanding of timing types and direct/indirect in-between methods in animation. Create two short in-between sequences with

Week	Learning Competency	Suggested Activities
		different timing (slow-in/slow-out or fast action) and conduct a line test to compare the motion results. • Smooth Moves Studio ○ Students will apply model sheets to create accurate in-between drawings for fluid character animation. Using provided model sheets, produce in-between drawings for a short sequence (head turn, half-body turn, or movement cycle) and finalize them for the scene folder. • In-Between Action Lab ○ Students will demonstrate proper techniques in producing finalized in-between drawings for character expressions, movements, and effects. Create and organize in-between drawings for a selected animated scene (walk/run cycles, lip-sync, or effects) and compile them neatly in the actual scene folder.
7	• Create storyboards. • Discuss animation tools and techniques.	• Storyboard Your Story ○ Students will create a visual sequence that effectively communicates timing, pacing, and camera angles. Develop a

Week	Learning Competency	Suggested Activities
		6–8 panel storyboard for a short scene including character and setting design, camera angles, and brief annotations. Director's Cut: Review & Revise - Students will apply feedback to refine and enhance their storyboard for clarity and visual storytelling. Review your storyboard draft, make revisions for timing, pacing, and visual clarity, and submit a finalized annotated storyboard. Animate Like a Pro - Students will apply keyframe animation, tweening, and movement techniques using digital animation tools. Create a short digital animation (3–5 seconds) demonstrating smooth keyframe and tweened movements for a character or object. Sound & Motion Studio - Students will integrate audio and special effects into digital animations to enhance storytelling. Animate a short scene including lip sync, facial expressions, and at least one sound effect, then mix and

Week	Learning Competency	Suggested Activities
		edit the audio within the animation software.
8 to 9	Create digital clean-ups and in-between drawing/key extremes and breakdown.	Smooth Digital Flow - Students will apply digital in-betweening techniques to create fluid and accurate character motions. Using animation software, produce in-between drawings for a short sequence (head turn, half-body turn, or movement cycle) and finalize the digital clean-up. Break It Down, Animate It Up - Students will demonstrate mastery of key extremes, breakdowns, and wave principles in digital animation. Animate a short scene incorporating key extremes and breakdowns for actions like walk/run cycles, lip-sync dialogue, or wave motions using proper digital in-betweening.
10 to 11	- Create digital animations. - Calculate animation costs.	Add the Magic - Students will apply digital effects to enhance the visual appeal of their animations. Apply at least two visual effects (e.g., shadows, glow, particle effects) to a short animation sequence

Week	Learning Competency	Suggested Activities
		and finalize the scene. • Export Like a Pro ○ Students will demonstrate proper finalization and exporting of digital animations for presentation or portfolio. Complete, render, and export your animation in the appropriate format while maintaining quality, resolution, and frame rate standards. • Price Your Pixels ○ Students will calculate animation costs using the Animation Guild price list. Prepare a cost estimate for a short animation project based on the Animation Guild rates for keyframes, in-betweens, and clean-up work. • Value vs. Cost Challenge ○ Students will apply value-based and cost-plus pricing methods to determine project pricing. Create a pricing proposal for an animated scene using both value-based and cost-plus pricing, then compare the results.
Suggested	• Individual Performance Task: From Sketch to Screen: The Animator's Starter	

Week	Learning Competency	Suggested Activities
Performance Tasks	Quest ○ Create a simple traditional animation that demonstrates understanding of animation fundamentals, hand-drawing techniques, and proper use of animation tools and materials. ○ Using traditional animation tools (pencil, paper, lightbox, or improvised flipbook), design one original character, apply basic hand-drawing techniques (squash and stretch, timing, or exaggeration), and produce a short 6–12 frame traditional animation showing the character in motion. ● Group Performance Task: Mini Studio Challenge: Build Your First Animated Scene ○ Collaboratively produce a short traditional animation scene by applying animation fundamentals, character design, and proper use of traditional animation tools. ○ In groups of 3–5, assign studio roles (character designer, clean-up artist, frame artist, materials manager), create one original character, and produce a short traditional animation scene (10–20 frames) using hand-drawn techniques and proper tools, then present your animation process and output to the class. ● Individual Performance Task: “From Boards to Motion: The Clean-Up Animator Challenge ○ Demonstrate understanding of storyboarding, in-between concepts, and clean-up techniques by producing a short traditional animation sequence from planning to refined drawings. ○ Create a 4–6 panel storyboard of a simple action scene, briefly explain the in-between drawing concept, produce key drawings and at least 3 in-between frames, then finalize the sequence with clean, refined traditional line drawings. ● Group Performance Task: Studio Pipeline Sprint: Storyboard to Smooth Motion ○ Collaboratively produce a short traditional animation sequence by applying storyboard planning, in-between drawing techniques, and clean-up processes. ○ In groups of 3–5, develop a short storyboard scene, assign roles (storyboard	

Week	Learning Competency	Suggested Activities
		artist, key animator, in-between artist, clean-up artist), create key drawings and in-between frames, finalize cleaned-up drawings, and present both your animation output and explanation of the in-between process to the class. Individual Performance Task: Digital Frame Builder: From Keys to Clean Motion - Apply knowledge of animation tools and techniques by producing a short digital animation sequence with key extremes, breakdowns, in-betweens, and clean-up output. - Briefly explain the digital animation tools and techniques you will use, then create a short 1–2 second animation (e.g., bouncing ball or simple character action) by drawing key extremes, adding breakdown and in-between frames, and producing final clean digital line art. Group Performance Task: Mini Digital Studio: The Key-to-Clean Production Challenge - Collaboratively produce a polished short digital animation sequence by applying animation tools, techniques, and proper workflow from key poses to clean-up. - In groups of 3–5, assign production roles (key animator, breakdown artist, in-between artist, clean-up artist, tools supervisor), discuss the digital tools and techniques to be used, create a short animated scene with key extremes and breakdowns, complete in-betweens, finalize digital clean-ups, and present both the process and finished animation.
